

# **Progress of Flagship Projects**

## - Activities of SteelEcosol -

23<sup>rd</sup> July 2024 The 6<sup>th</sup> Government-Private Forum on the Cleaner Energy Future Initiative for ASEAN

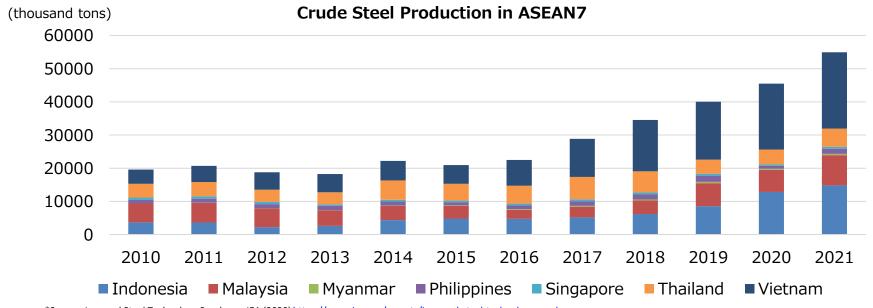

### Fumitaka Kato, Dr.

The Committee member for International Environmental Strategic Committee The Japan Iron and Steel Federation

Senior Manager, Environment Planning Div. Nippon Steel Corporation

## SteelEcosol's Mission: Promote the Diffusion of BAT in ASEAN Steel Industry

- Steel sector is responsible for about 8% of global final energy demand and 7% of global direct energy-related CO<sub>2</sub> emissions\*
- Innovative technologies (e.g., hydrogen ironmaking) are being developed to achieve carbon neutrality in the steel sector, but these technologies will not be widely available immediately
- Until such innovative technologies become available, improving energy efficiency through Best Available Technologies (BAT) will play an important role in the ASEAN steel industry, where steel making capacity is/will be increasing
- SteelEcosol aims to promote energy conservation in the ASEAN steel industry by BAT adoption and operational improvements

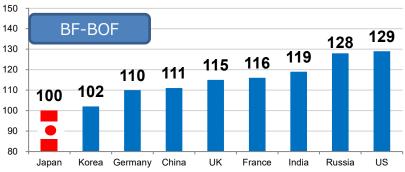

<sup>\*</sup>Source: Iron and Steel Technology Roadmap, IEA (2020) <a href="https://www.iea.org/reports/iron-and-steel-technology-roadmap">https://www.iea.org/reports/iron-and-steel-technology-roadmap</a>

## How cooperation with Japan benefits ASEAN Steel Industry

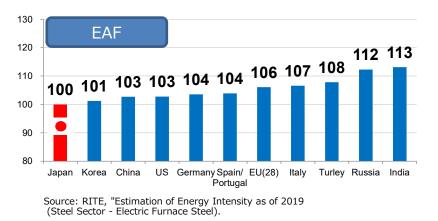

- Japan's steelmaking process is the most energy-efficient in the world by deployment of the Best Available energy-saving Technologies (BAT)
- Knowledge of the Japanese steel industry will be beneficial in promoting energy conservation in the ASEAN steel industry

### **Energy efficiency by country/region (2019)**

Indexed as Japan 100

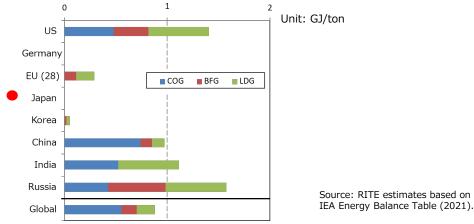

Source: RITE, "Estimation of Energy Intensity as of 2019 (Steel Sector – Blast Furnace – Basic Oxygen Steel).

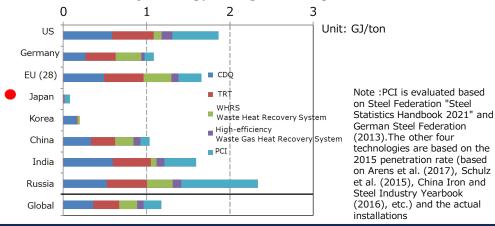

### Potential of Energy Saving Technologies (2019)

[Potential for the recovery and efficient use of by-product gases]

### [Potential for the major energy saving technologies]

## ASEAN and Japan Steel Industries started exchanges in energy conservation in 2014

 ASEAN-Japan Steel Initiative (AJSI), started in 2014, contributes to energy saving and environmental protection in ASEAN through mutual and collaborative platform

**Purpose** 

- Exchange knowledge and experiences and thereby contribute to the energy saving and environmental protection in ASEAN
- Encouraging technology transfer from Japan to ASEAN steel industry

**Participants** 

#### **Public Sector**

Ministries and governmental institutions related to steel industry and energy saving in ASEAN and Japan

### **Private sector**

ASEAN Iron and Steel Council (AISC), national association in ASEAN, JISF and its member companies, Engineering Companies

Main Activities

Technologies
Customized List

Public and Private
Collaborative Seminar

## We have conducted steel plant diagnoses at 16 steel plants in ASEAN

### **Outline**

- Check <u>operation and energy consumption status</u> and evaluate <u>energy efficiency</u> level of the steel plant using ISO14404\*
- Visualize the effect of CO<sub>2</sub> reduction
- Provide <u>feedback for operational improvement and technology implmentation</u> by Japanese experts
   \*ISO14404 is an international standard for calculating CO2 emissions and energy consumptions from a steel plant.

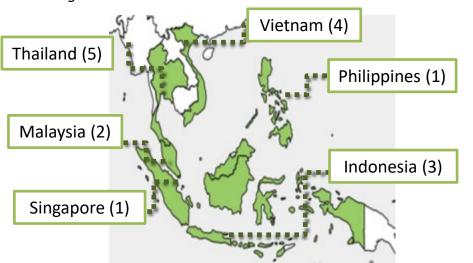

Benefit

- The steel plant can understand their current energy consumption status and CO2 emissions
- The Japanese experts will recommend energy conservation measures specifically for that plant

# Steel plants who participate in the diagnosis can receive a lot of infomation from Japanese experts about current operation.

### Steel plant diagnosis history in ASEAN

Diagnosis can be executed both on-line and off-line

### **Example schedule for on-site diagnosis**

		Day1	Day2	Day3	Day4				
	АМ	Greeting, Introduction, & Confirmation of the energy data	Continuous Cast Diagnosis	Discussion & Summarize the results	Reporting & Discussion				
	PM	Electric Arc Furnace Diagnosis	Hot Rolling Diagnosis	Discussion & Summarize the results	Additional information				

## **Review of Steel Ecosol Activities in 2023FY**

# **Review of SteelEcosol Activities in 2023**

- 1) On-site Steel Plant Diagnosis at a steel plant in ASEAN
- 2) Follow up survey of Steel Plant Diagnosis in 2022
- 3) Related Event: AJSI webinar

## **Review of Steel Ecosol Activities in 2023FY**

- 1) On-site Steel Plant Diagnosis at a steel plant in ASEAN
- ✓ Proposed energy efficiency measures

	type	Proposed energy efficiency measures	CO2 reductions			
1-1	Revamping	Hot Direct rolling without Reheating Furnace	49,800 t-CO2/y			
1)-2	Operational	Reduced heat loss through capacity matching	Cannot quantify			
1)-3	Operational	Raising the billet charging temperature to Reheating Furnace	Cannot quantify			
2	Revamping	Oxygen burners for ladle preheating	2,450 t-CO2/v			
3	Revamping	Tundish Plasma Heater	4,400 t-CO2/y			
4	Revamping	Waste heat recovery of sinter cooler	8,400 t-CO2/y			
<b>⑤</b>	Operational/ Investment	Minimizing pressure fluctuation of gas holder	Cannot quantify			
6	estinent	Inter-process optimization through energy/CO2 management system	Cannot quantify			

✓ Estimated CO2 reduction

65,050\* tCO2/y

\*CO2 reductions are estimated and provisional values based on assumptions.

## ✓ Feedback from the steel plant

"Calculation of CO2 emissions according to <u>ISO 14404</u> is very useful in <u>accurate assessment of the</u> <u>current situation</u>. Some of the proposed measures for each process are <u>particularly valuable</u> and could be <u>useful tools</u> for future planning and implementation."

## Review of Steel Ecosol activities in 2023FY

- 2) Follow up survey of online steel plant diagnosis in 2022
- Follow-up on the status of energy use and planning and implementation status of measures proposed at the steel plant diagnosis.
- ✓ Proposed energy efficiency measures in 2022

	•	07 7	
Туре		Proposed energy efficiency measures	CO2 reductions
For E	AF		
(1)	Operational	Reducing heat-loss by shortening TTT (Tap to Tap Time)	Cannot quantify
(2)	Revamping	Scrap pretreatment with scrap shear	5,600 t-CO2/y
(3)	Operational	Effective use of combustibles in scrap	5,600 t-CO2/y
For R	eheating Furn	ace (RHF)	
(1)	Operational	Air ratio control	3,800 t-CO2/y
(2-1)	Operational	Raising temperature of combustion air	3,000 t-CO2/y
(2-2)	Revamping	High temperature recuperator for reheating furnace	1,700 t-CO2/y
(2-3)	Revamping	Regenerative burner for reheating furnace	3,400 t-CO2/y

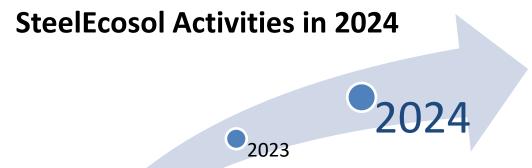

- ✓ Results of follow-up For RHF (2-2): <u>Decided to install</u> For RHF (2-3): <u>Continue study to install</u>
- ✓ Future task
   Verify the effectiveness of project implementation

- ✓ Other issues confirmed during follow-up
- ▶ Bad quality of available steel scrap, which can lead to increased electricity consumption in Electric Arc Furnace
   ➡ Japanese experts will continue follow-up and support considering measures to prevent deterioration of energy intensity
- 3) Related Event: AJSI webinar
  - ✓ <u>Information sharing</u> on government and corporate initiatives on <u>carbon neutrality in the steel industry</u> in Japan and ASEAN
  - Over 170 people from 8 countries joined

AJSI Webinar 2024
Achieving Carbon Neutrality in the Steel Sector
6th February, 2024

## **Future Activities**

2022

- Continuing and deepening efforts to reduce energy consumption and CO2 emissions in steel industry
- Support emission reduction project implementation through steel plant diagnosis and follow-up activities
- ➤ Information sharing through the TCL (BAT list) and public-private meetings

We continue to collaborate between ASEAN-Japan steel industry with support of CEFIA.

Thank you!

# What is Technologies Customized List (TCL)?

◆ Technologies Customized List offers information of best-energy saving technologies for ASEAN steel industry.

### **List of Technologies**

Energy saving effect, co-benefit, supplier information etc.

- 44 techs for BF-BOF
- 35 techs for EAF
